M-18 Escalator Bullet Trap by Patriot Range Technologies.

The M-18 is an Eighteen-degree trap with AR 500 + armor primary impact plates. The M-18 is designed to accept all small arms projectiles, other than dedicated armor piercing type rounds.

The M-18 bullet trap is designed with multiple "spent projectile" recovery configurations. Each configuration allows environmental protection during projectile accumulation and disposal.

The M-18 trap can accept all known pistol, shotgun, rifle and high-powered rifle ammunition types, with the exclusion of certain armor piercing rounds. High-powered uses include .223 (5.56) fmj, .308 (7.62), and 50 BMG, as well as many other high-energy types.
